

Science task

To help you prepare for starting science at secondary school next year we would like you to think about the follow question:

What do I want to find out when I am studying science at secondary school?

We would like all students to be able to tell their science teacher a few questions that they would like to be able to answer thought the work they are doing in their science lessons. These should be ideas you are really interested in and want to find out more about.

You should produce:

- Two or three questions you would like to be able to answer
- A brief explanation about why these questions are important to you

If you have done any research or have any ideas about how you could answer these questions we would love to see that as well.

There are some links below which you might find useful to get you thinking. We are really looking forward to meeting you all in person and seeing your questions when we do.

Mr Colville and the Science team
